Hosting (Y)our Strategy!

Microsoft Dynamics is a line of integrated, adaptable business management solutions that automate and streamline financial, customer relationship, and supply chain processes in a way that helps you drive business success.

Combined with hosting by GoIWx for Dynamics, you get the reliability of a Tier III and 911 data center, flexible licensing and services like data backup and security so you can focus on your business and not on technology.

Hosting Solutions
Networking Infrastructure Solutions

We bring cloud hosting for Microsoft Dynamics to a new level of convenience, service and profit.

Go!Wx has engineered a cloud delivery offering for Microsoft Dynamics that consists of scalable infrastructure, that allows for server side activities, that is accessible for service by the partner and provides the highest availability including flexible licensing options.

Experience & Installation

Experience has taught us that putting up a multi-tenant environment for all to share is asking for trouble. Because of our Partner focus, and because our Partners need flexibility to put up the necessary solutions for their customers, Go!Wx creates an environment specifically for each partner that allows for multi-tenant. We also know that we can extend our partners reach and knowledge base by performing co-installations of the Microsoft Dynamics applications along with the other ISV solutions and front office solutions needed for each individual customer. After the environment is configured, Go!Wx hands it over, fully functional, fully featured, and ready for the partner and end customers modifications.

Efficiency of a Cloud Deployment

We have specialists on staff that understand both hosting and Microsoft technologies. With more than 15 years in hosting ERP applications, we have the breadth of experience that you require. We can help fill the "technology" gap if needed when helping our partners make sure each of the end customers get up and running in the cloud on time and on budget.

You get all the credit with Microsoft

Because Go!Wx doesn't have a quota with Microsoft, we happily make it convenient for the partner to report SPLA usage directly to Microsoft. We provide our partners with a month end report, by customer indicating the number of SPLA SKU's needed to be reported to Microsoft month after month. Go!Wx helps our Partners stay in control by not trying to take over the end customer by taking on a subordinate role to the partner. Although we don't call it a white label program, Go!Wx makes sure that all communication with the customer are done as if we were the partner ourselves.

Supporting your organization and (Y)our clients

Because we know how important solving issues or adding solution can be, Go!Wx provides AD level access to the web front end server and to the database instance backend. We provide personalized 24/7/365 server uptime support for the infrastructure. The only thing left is for the Partner to be responsible for managing the application for their customers.

Hosted solutions, software, and services to improve ERP and financial, customer-relationship, and supply-chain management software rollouts.

Hosted Microsoft Dynamics GP is a complete and scalable business management solution that helps growing and midsize organizations get up and running quickly, while maximizing the productivity of your people.

Hosted Microsoft Dynamics GP includes robust financial and operational functionality, such as business intelligence, reporting, budgeting, and forecasting, so you can be confident that your solution will adapt to the changing needs of your customer's business.

By hosting Microsoft Dynamics GP with GoWx in a cloud environment, you can get up and running quickly, maximizing the productivity of your people with the stability you require, and the scalability so you know your solution will support business-critical needs, today and into the future.
